Portfolio

Technical Skills & Tools

Languages: JavaScript, TypeScript, C/C++, HTML/CSS

Frontend: React.js, Next.js, Tailwind CSS, React Hook Form, Zod

Backend: Node.js, Express.js, REST API Design, JWT Authentication, RBAC, MVC / Clean Architecture

Databases: MongoDB, PostgreSQL

Dev Tools: Git, GitHub, Postman, Vercel, Render

Problem Solving: Solved DSA challenges on [LeetCode](#) focusing on time/space complexity optimization.

AI/Integrations: GitHub Copilot, Claude Code, Ollama (Qwen), Google Antigravity IDE, AI-assisted development

Open Source Contribution : Contributed to React ecosystem projects under professional mentorship and completed Hacktoberfest with 6+ accepted PRs. Leveraged JavaScript and React to resolve issues, report test cases, and improve documentation in high-traffic repositories.

Professional Experience

Kantar

June 2024 – Present

Software Engineer

- **Build an AI-driven automation pipeline using Python, LangChain, and LLMs** that parses unstructured .docx questionnaires, translating logic into production-ready syntax and reducing manual programming time by 85%.
- **Architected an internal full-stack MERN application (React.js, Node.js, Express, MongoDB)** with a drag-and-drop UI and RESTful API, streamlining survey script generation and validation for cross-functional teams.
- **Developed an accurate ROI simulation engine (Node.js/TypeScript)** for enterprise B2B dashboards, delivering real-time marketing predictive forecasting via seasonal weightage and debounced API interactions.

Promact Infotech

Jan 2024 – April 2024

Fullstack Developer

- Build a Customer Success Platform in **React and Nodejs**, automating notifications for time savings and enhancing stakeholder communication. Implemented secure user registration/login, real-time email updates, and PDF export functionality, improving user experience and engagement
- Led a 3-person sub team acting as a primary source of contact between clients and the development team, ensuring precise translation of client requirements into actionable deliverables. Built and managed distributed systems using microservices and AWS infrastructure.

Technical Projects

Meeting Scheduler | *Next.js, Node.js, Express.js, MongoDB, TypeScript, AI* | [Github](#) | [Live](#)

- Designed and build a scalable RESTful API with Node.js, Express, and MongoDB. Designed complex, TypeScript-strict scheduling algorithms to automate room reservations, handle dynamic data relationships, and effectively prevent real-time booking conflicts.
- Implemented robust JWT authentication and custom middleware for Role-Based Access Control (RBAC), ensuring strict data privacy and creating distinct, secure application interfaces for Admin and Employee user types.
- Integrated a multi-provider AI Chatbot (Gemini, local LLMs) utilizing function calling to allow users to naturally query room availability, view amenities, and automate bookings directly through a conversational UI.

Expense-Tracker | *React.js, Node.js, Express.js, MongoDB, TypeScript* | [Github](#) | [Live](#)

- Architected a scalable REST API following Clean Architecture and MVC patterns, separating business logic into User, Expense, and Budget modules using the Repository Pattern for improved testability and maintenance.
- Engineered a responsive and high-performance frontend with Vite and Tailwind CSS, utilizing React Hook Form and Zod for complex client-side validation and a seamless user experience.
- Implemented secure JWT Authentication and deployed a production-grade environment on Render (Backend) and Vercel (Frontend), configuring CORS and environment variables for secure cross-origin communication.

Education

Maulana Abul Kalam Azad University of Technology, Kolkata

2020 – 2024

Bachelor of Technology in Computer Science and Engineering | Grade: 8.95

Kolkata, West Bengal
