WORK EXPERIENCE

Jun 2024 - Present

Software Engineer
Kantar

- Developed interactive B2B dashboards using React.js and Node.js for marketing effectiveness platform (LIFT ROI), enabling clients to monitor campaign performance, simulate budget scenarios, and visualize historical media data across multiple channels with 90 % forecast accuracy
- Built RESTful APIs with Express.js and MongoDB to process and aggregate marketing data from multiple sources, implementing data optimization techniques that reduced dashboard load times and supported real-time scenario simulations for Fortune 500 clients
- Created reusable React components for data visualization and prediction modules, integrating Chart.js for displaying media insights, business performance metrics, and ROI calculations while maintaining responsive design across enterprise applications

Jan 2024 - Apr 2024

Full Stack .NET Developer
Promact InfoTech

Developed Customer Success Platform using Angular and .NET, enhancing stakeholder communication by 30%. Automated stakeholder notifications, saving 15 hours weekly, leading to significant time savings.

- Implemented robust user authentication and access controls, boosting data security by 25%.
- Improved stakeholder engagement and satisfaction by 50% through enhanced communication processes.
- Integrated email notification system for real-time updates, increasing stakeholder engagement by 40%.
- Enhanced user experience with offline reference export feature, improving user satisfaction by 20%.

Jul 2023 - Oct 2023

Frontend Web Developer
CodeClause

Collaborated closely with a team of 5 developers ensuring adherence to industry best practices and coding standards.

- Delivered 3 fully functional web components that significantly enhanced user experience, resulting in a 20% increase in user engagement and contributing to project milestones within tight deadlines.
- Recognized by the development team for exceptional problem-solving skills, showcasing adaptability in

Developed Customer Success Platform using Angular and .NET, enhancing stakeholder communication by 30%. Automated stakeholder notifications, saving 15 hours weekly, leading to significant time savings. • Implemented robust user authentication and access controls, boosting data security by 25%. Improved stakeholder engagement and satisfaction by 50% through enhanced communication processes. • Integrated email notification system for real-time updates, increasing stakeholder engagement by 40%. • Enhanced user experience with offline reference export feature, improving user satisfaction by 20%.

92 Days

Airbnb

The Airbnb Clone project demonstrated my ability to create a comprehensive platform. • Implemented various functionalities like adding and deleting content through server-side routes, managing errors and loading states effectively using Next.js, and ensuring smooth interaction between server and client components. — Integrated user authentication using Google and Github, enabled image uploads via Cloudinary CDN, and developed advanced search features allowing users to filter by category, date range, and location. Furthermore, I created a booking system allowing guests to cancel reservations. — Tech Stack: React, Tailwind, Prisma, MongoDB, and NextAuth for credential authentication (Google, Github) and session management.
